

Session 02 [CSS]

☐ *Part 01 [intro]*

- ☐ CSS History
- ☐ How and where to write CSS , Semi Column [CSS Rule]
- ☐ Internal vs External [CSS File and Folder, and the CSS File Name]
- ☐ CSS File name and the link tag [Href, rel] and more than one file CSS is Available
- ☐ CSS order [sequence] and override while typing two selector and each one apply its own CSS styles
- ☐ Recap on all of this [history, how to write, where to write]

☐ *Part 02 [class]*

- ☐ Inline Style and why the external is the best way
- ☐ CSS Classes [Classification]
 - ⇒ if we have more than one element with the same name and want some of them take special styles
- ☐ add two class attributes
- ☐ Classes Names Advices [modifiers, dashes, under score]
 - ⇒ instead of make the class implement all the declaration [Tailwind and bootstrap]
 - ⇒ Classes is case sensitive Center is not like center
 - ⇒ Add more than one Class

☐ *Part 03 [class and id]*

- ☐ CSS [ID] Select Elements by ID
- ☐ The difference between selecting by class or id

- ☐ [unique id vs more than one class]
- ☐ target HREF with id not with class
- ☐ # and the . dot
- ☐ We select by class always
- ☐ can element take more than one id ? id=" demo demo02" class=" demo demo02"

☐ **Part 04 [div and percentage]**

- ☐ div element : [divider] 2000
 - ☐ [Table Based design earlier in HTML we was design with tables]
- ☐ yahoo page and table websites and CSS winner
- ☐ accessibility problem from the div
- ☐ example before selecting div parent and child and unit using percentage [50% from parent]

☐ **Part 05 [selecting and specificity]**

- ☐ how to select elements in many ways:
 - ☐ h2.text-center
 - ☐ h2#demo
 - ☐ parent and child [nesting selector]
 - ☐ Specificity

☐ **Part 06 [Display and examples]**

- ☐ Display property [inline, inline-block, block] [anchor tag , and paragraphs] [width and height]
- ☐ Inline block [mix between block and inline] to didn't break lines and take width and height
